INVISIKNOT™ Ankle Syndesmosis Repair Kit

Reliable, low profile and flexible repair for high ankle sprains
Designed to eliminate complications associated with rigid screw systems and to sustain expected physiological loads during healing.

Ankle Syndesmosis Solutions from Smith & Nephew support ankle syndesmotic ligament repair in fibular fracture and non-fracture cases utilizing a suture tape/button construct.

**Innovative Design.** Comprised of two stainless steel buttons, one medial and one lateral, connected with ULTRATAPE Suture

- **Lateral button**
  - Easily reduced using a one way sliding knot
  - **Non-fracture kit:** features a lateral button with a wide surface area to eliminate the need for a buttress plate
  - **Fracture kit:** features a lateral button designed to sit flush in the 3.5mm hole of a Smith & Nephew fracture plate

**Flexible.** Construct enables micro motion between the tibia and fibula eliminating complications commonly found with rigid syndesmotic screws.

**Low profile.** No knot stack, lateral knot assembles inside the lateral button.

**Reliable.** Designed to sustain physiological loads during the healing period.
